Téo Jouette

Puteaux 92800 – jouette001@gmail.com – LinkedIn: www.linkedin.com/in/teo-jouette

Engineering student in Engineering Physics (graduating 2027), with training focused on signal processing, filtering and telecommunications, and first space experience on the IGOSat nanosatellite (link budget, orbital simulation). Currently on an Erasmus exchange in Brescia (Italy), I am looking for a 6-month final-year internship in aerospace, starting in March 2027.

EDUCATION

École d'Ingénieurs Denis Diderot (EIDD) – *Université Paris Cité* | 2024 – 2027 (expected graduation: 2027)

- Engineering degree (5-year programme, Master's level), major in Engineering Physics – final year
- Erasmus exchange at the University of Brescia (Italy), Sept. 2026 – Feb. 2027 (courses taught in English)
- Relevant coursework: Signal Processing (Kalman filtering), Image Processing, Control Systems (state observers), Mechanics (Kepler's laws, Newtonian mechanics, general relativity), Telecommunications, Remote Sensing

University Preparatory Programme for Engineering Schools (CUPGE) – *Université Paris Cité* | 2022 – 2024

Baccalauréat (French secondary school diploma) – *Lycée Agora Puteaux* | 2019 – 2022 – With Honours, European section (German)

PROFESSIONAL EXPERIENCE

Systems engineering internship on the IGOSat nanosatellite | May – July 2026

IGOSat project – APC Laboratory (AstroParticle & Cosmology) and CNES

- Carried out the link budget and telemetry budget between the nanosatellite and the ground station
- Developed Python and Scilab simulations to analyse and validate the performance of the radio link
- Assessed link margins and data-transmission capacity against mission requirements: all computed margins are validated

Project coordinator – IGOSat mission simulation | February 2026 (engineering project, 3 weeks)

École d'Ingénieurs Denis Diderot & Université Paris Cité

- Coordinated a team of 3 students to update, validate and document an orbital mechanics and power budget simulation tool
- Contributed to the code (Matlab, Python, Scilab) and to testing: selected the TLE of an in-service satellite close to IGOSat and integrated it into the simulation

Co-lead of the Sustainable Development working group – ASTRES | since July 2026

Alliance Stratégique des Étudiants du Spatial (Strategic Alliance of Space Students)

- Leading the group: awareness-raising articles, thematic meetings, conferences

Internship at the Line 1 Train Maintenance Workshop (RATP Group) | May – June 2025

Mechanic and maintenance technician

- Overhaul and servicing of MP05 and MP89 pneumatic rolling stock; support for quality, safety and environment (QSE) audits

SKILLS :

- **Estimation and processing:** Kalman filtering, state observer, signal and image processing, link budget, fundamentals of orbital mechanics
- **Programming:** Python, Matlab, Scilab, C; basic VHDL and LaTeX
- **Simulation and tools:** CST (electromagnetic simulation), Fusion 360, FreeCAD, Blender, Microsoft Office, Adobe Creative Suite
- **Languages:** French (native), English (B2, reading technical publications), Italian (A2), German (A2)

PROJECTS (details on my portfolio: https://tjouette.github.io/portfolio/)

- **Kalman filter:** estimation of an aircraft's angle of attack and pitch rate from noisy measurements; covariance tuning (Python)
- **Lunar lander guidance:** discrete state-space model, controllability/observability, state observer, command from orbit to crater (Matlab)
- **Image processing:** detection of a comet and a text hidden in a noisy image (Gaussian filtering, contrast stretching, thresholding; Python)

Interests: badminton, drawing, DIY (miniature motorised vehicle, browser extensions)
